

Module 11: Meteorology

Topic 3 Application: Climate Zones of the World Map

The Earth has different climate zones. One major cause of different climates is the locations latitude. It is important in Earth science to know the approximate locations of the different climate zones. Using the Blank Map of the World, label each of the climate zones listed below on the map.

On the blank map of the world, you will need to label, outline, and color the following climate zones:

- Desert
- Tundra
- Marine West Coast
- Semi-arid
- Humid Continental
- Highland
- Humid Subtropical
- Tropical Wet and Dry
- Ice Cap
- Tropical Wet
