

Module 3: Sensation and Perception

Topic 2 Content: Ishihara Color Test Plate

Instructions

Take a moment to look at the image of the circle below. What do you see?

Feedback

If you saw the number 74, you likely do not have any color deficiency. If you saw the number 21, you likely have some form of red-green color blindness. If you saw no numbers at all, you might be amongst a rare population and lack more than one type of cone.
