 How alike or different are you from your sibling? If you don't have one, use a friend or relative as an example. Seriously, if my brother didn't look so much like me, I'd swear we were NOT related!

 Do you two get along? Man, that's why I LOVE being an only child! No sibling drama.

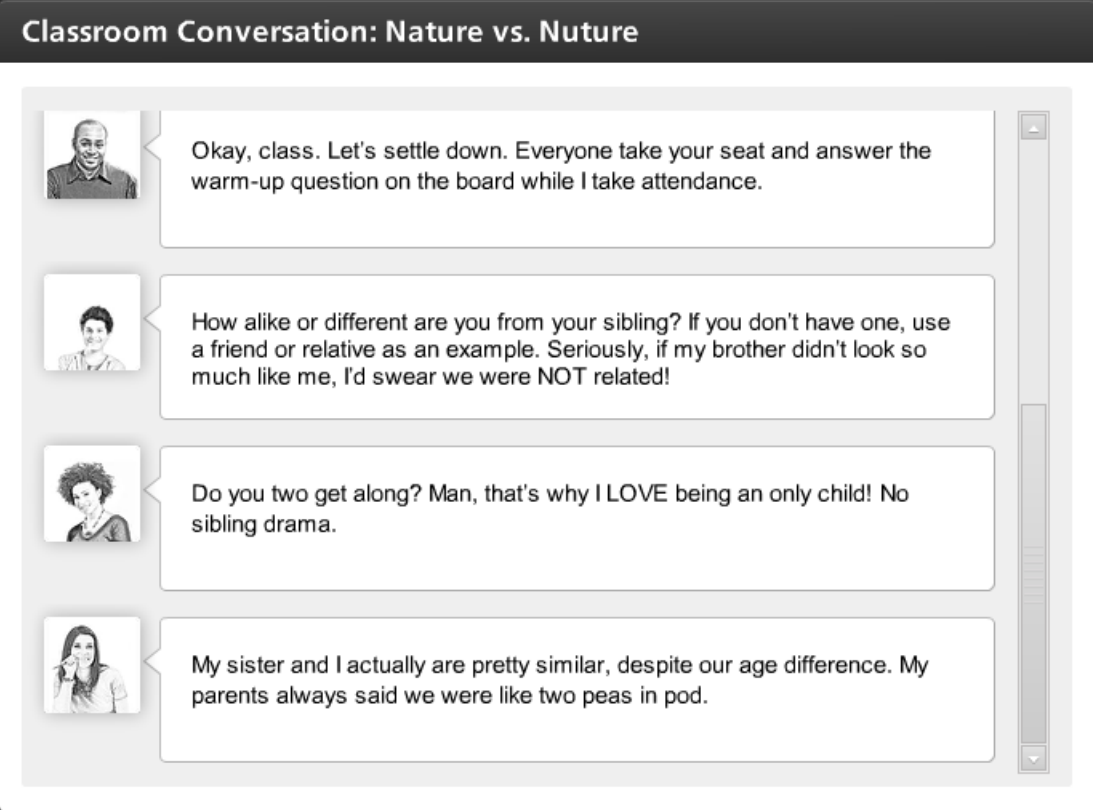

Do you two get along? Man, that's why I LOVE being an only child! No sibling drama.

My sister and I actually are pretty similar, despite our age difference. My parents always said we were like two peas in pod.

Well, aren't you lucky! I just don't get my brother. My mom always says we'll get along someday, but I don't see it happening any time soon.

The screenshot shows a chat window titled "Classroom Conversation: Nature vs. Nurture". It contains four messages from different users, each with a small profile picture icon to the left of the text. The messages are as follows:

- Message 1: "Do you two get along? Man, that's why I LOVE being an only child! No sibling drama."
- Message 2: "My sister and I actually are pretty similar, despite our age difference. My parents always said we were like two peas in pod."
- Message 3: "Well, aren't you lucky! I just don't get my brother. My mom always says we'll get along someday, but I don't see it happening any time soon."
- Message 4: "What makes you so different from your brother?"

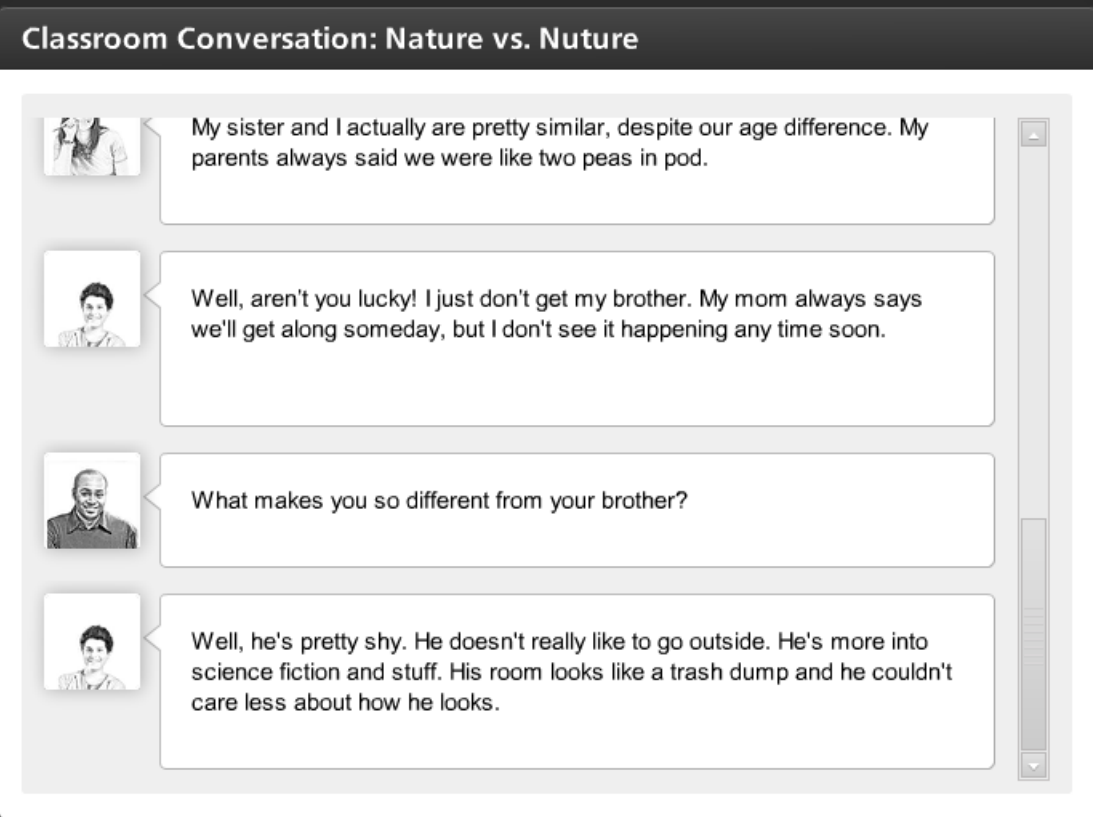

What makes you so different from your brother?

What makes you so different from your brother?

Well, he's pretty shy. He doesn't really like to go outside. He's more into science fiction and stuff. His room looks like a trash dump and he couldn't care less about how he looks.

You can't think of anything similar about both of you? Just think about it. What about your values, the things you consider important?

Hmmm. I guess we are both honest and are both a little sensitive to criticism. Come to think of it, we're both pretty creative.

On that note, today we're going to discuss the role our genetics and our environment, or external influences, play in molding us into who we are. Interestingly, both play a part, but exactly how much of a role each plays is still up for debate.
